Email Setup Instructions for Android Email

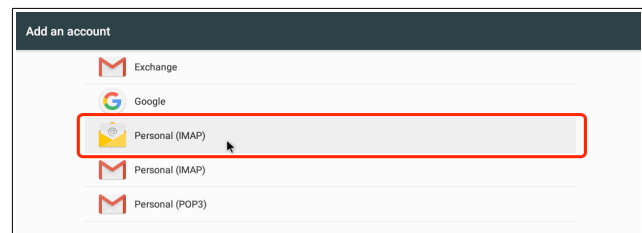

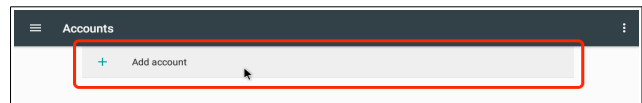

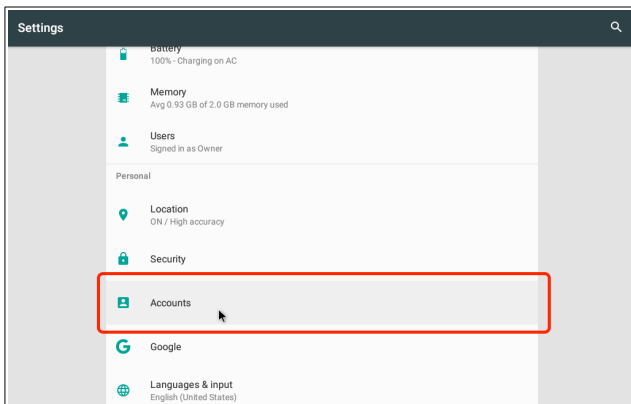

Included are the instructions for IMAP e-mail account setup in Android's Email application.

NOTE:

- Depending on your internet connection speed and how much previous mail you have, synchronizing may take several minutes to several hours. Email can be used during this time without issue.
- The instructions or images may not be identical to your specific device.

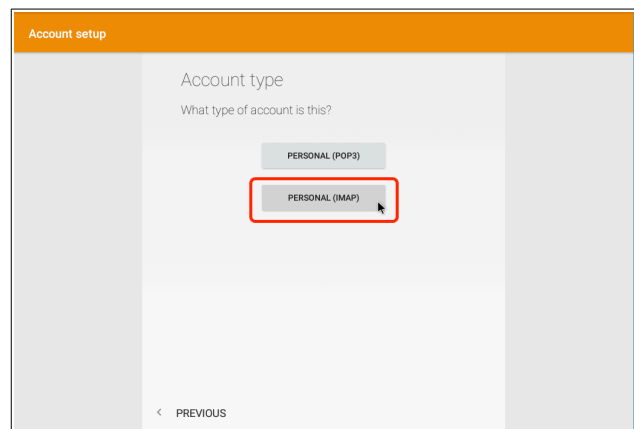

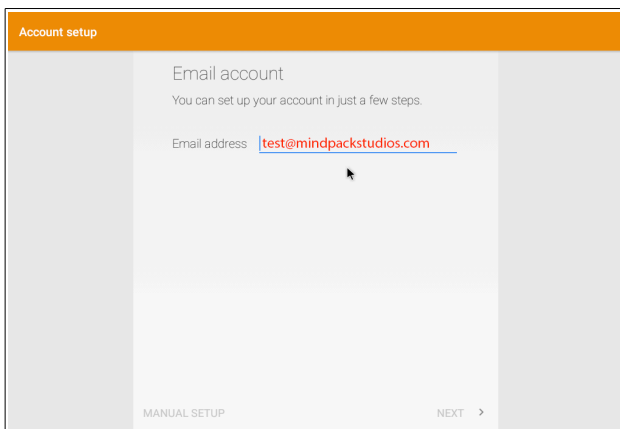

1. Add existing mail account.

A) Open Settings > Accounts > Add Account and click on the yellow Personal (IMAP) option.

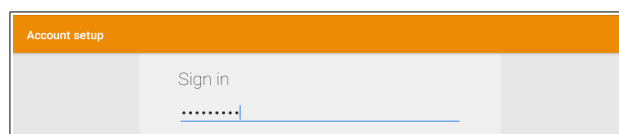

B) Enter your full email address and click next.

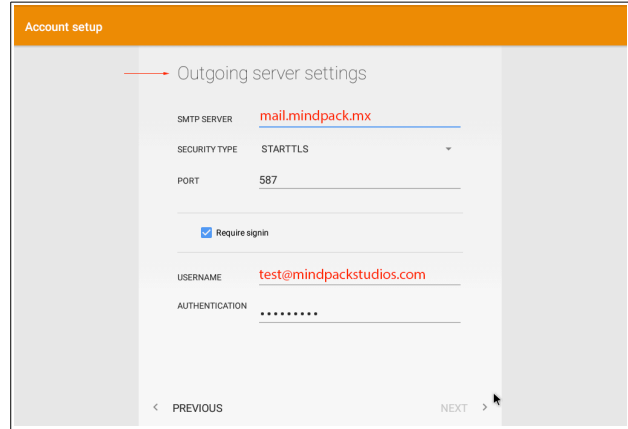

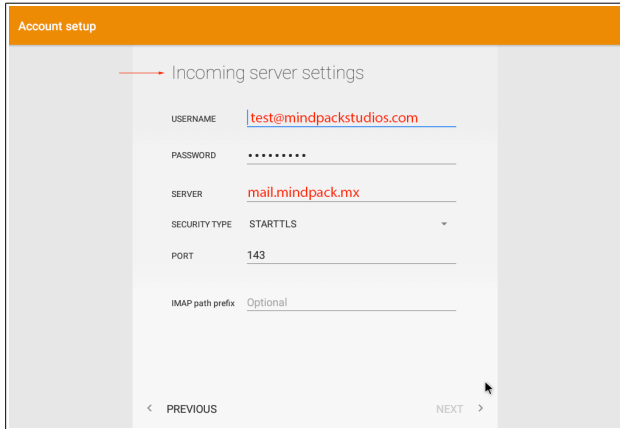

C) Choose Personal (IMAP).

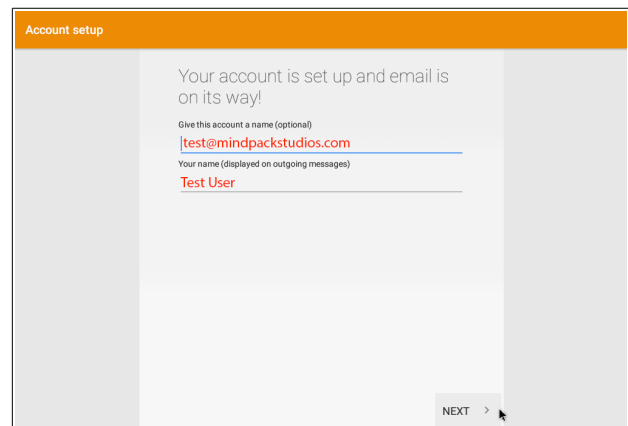

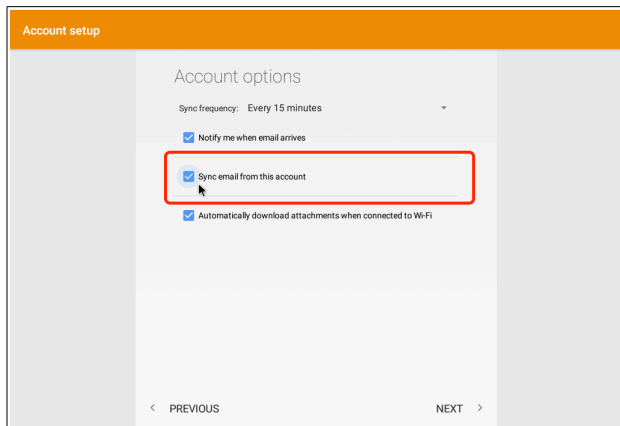

D) Enter your password, click next.

- E) For both the Incoming and Outgoing server settings, change the server to the server hostname provided by Mindpack Studios. For the purpose of this example, mail.mindpack.mx is being used. All other settings should appear as in the images. Click next.

- F) The default settings for Account options are fine, though some may be changed for your preference. "Sync email from this account" must be checked, however. Click Next.
G) Enter your name as you wish it to be displayed to those receiving your emails, then click next.

- H) Exit Settings and open the yellow Email application.
